# Team Concepts

## Responsibility: Improv Facilitator

Describe the three concepts your team generated during the Improv session. You may use text, images, or a combination of both, choose whichever communicates your ideas most effectively. Be sure that each description is clear and detailed enough to capture the essence of the concept.

## \*References in Speaker notes

Concept 1	Concept 2	Concept 3
<p>Our first concept seeks to introduce content streams to educate students through their personalized style of learning. Through a platform, similar to TikTok, students would be able to access educational and curriculum-based concepts sourced by local educators. Additionally, curriculum-based content can be accessed through TV channels that are facilitated by AI educators.</p>  <p>(Image of concept 1, 2025)</p>	<p>Our second concept presents the integration of built-in systems to personal items. These systems work as personal assistants by recording vitals and changes in emotion (ex. stress) to in turn provide helpful tips. For example, a water bottle can possess an imbedded camera that tracks your facial expressions when working through a math problem and based on this input can offer guidance in how to go about solving the problem.</p>  <p>(Image of concept 2, 2025)</p>	<p>Our third concept involves the introduction of Virtual Reality to more fields of education. VR education systems would be a greatly beneficial tool for both visual and kinesthetic learners. We believe that through various simulated environments different concepts could be understood in a whole new light. VR could also be a tool used in exposure therapy or training modules to familiarize students with the realities of their desired field.</p>  <p>(Image of concept 3, 2025)</p>

# Team Storyboard

The setting is set through the video, which is followed up by group creation. This is to create the foundation of the concept, after our group activity and discussion, we introduce our future vision and later create an immersive experience where everyone can live through a possible future situation.

The key concepts for this are involving students to think about the topics to help create a foundation of understanding for our perspective and project. The other concept with the drill activity is to try to creatively immersify students in an activity to showcase a real world scenario to deepen understanding on our project.
